

# Trauma One

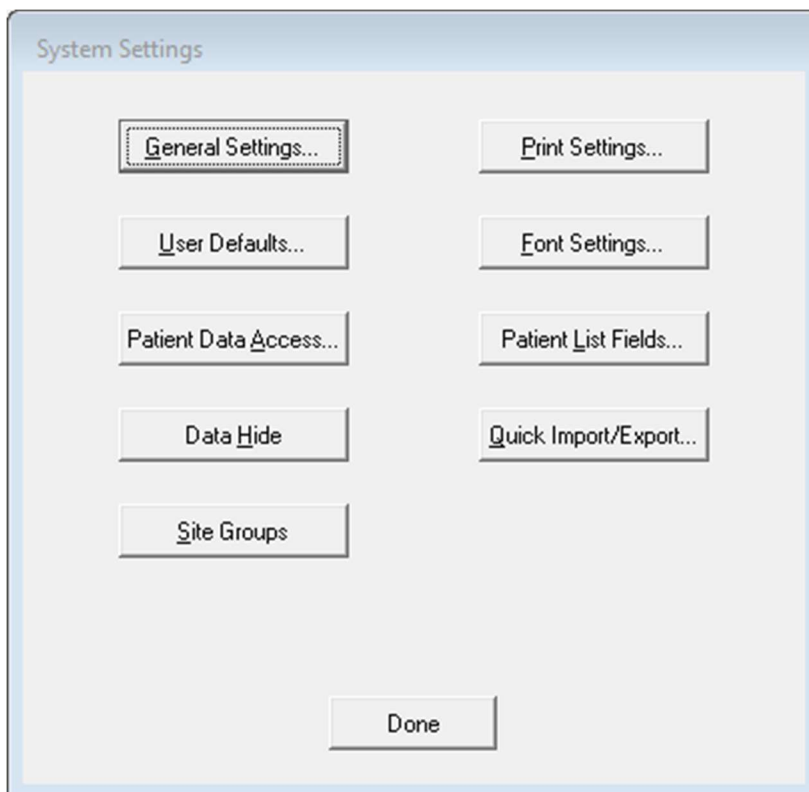

## Add/Adjust Open Patient UI and Search Criteria:

### Summary:

*Occasionally a customer will ask for an additional field to be added to the patient Browse Window.*

### Steps to take:

1. Go to TOOLS/SYSTEM SETTINGS
2. Click on Patient List Fields

3. Then click on the field that you want to add to the view on the Open Patient UI. Then click OK. If what you want to add is not in the window click Add and you will be presented with a picklist of all Unicopy fields in Trauma One.

*Occasionally a customer will ask for an additional field to be added to the patient Search Window.*

This takes a bit more work and is probably best handled by a Tier 2 representative. There are 3 databases that are involved in the Open Patient/Search Criteria UI.

1. PATIDIDX - This holds the fields that can be searched on
2. PII\_CONT - This holds relationships if applicable. For example, LASTNAME + FIRSTNAME.
3. MMFLDS - This is the list of fields available to be seen in the Open Patient Browse window.

**Steps to take (training required):**

4. It is best to do the steps above for adding a field to the view
5. Then manually open PATIDIDX and PII\_CONT to be consistent with MMFLDS.
